

INOVO

Company Profile

About Us

We are of the most trusted quality machinery manufacturer & exporter in India .we are having complete qualified technical team to give there best to our customers. We are engaged to provide best in service and quality products. Which make us differ from other

Manufacturing Facility

Inovo Engineering established on 2015 with pure vision , pure trust , pure relations and pure innovations. Company on 20000 sqft area for manufacturer facility and clean campus to giving beautiful work place. Our happiness and emotions are add to all product which we make. Any time any place service we promised to provide.

Our Vision

Pure Quality
Pure Trust
Pure Relationship
Transparency in everything we do.

Why we are ?

WE
PROMISE
NO COM-PROMISE
WITH
QUALITY

Our quality products are consisting of superior design and latest technology with high graded raw materials.

Benefits include:

Up to Double the production rate of similar size conventional water-cooled pulverizing systems

Lower operating costs through 50% energy savings

Lower-maintenance cost-and reduced transportation costs

2.5X extended disc life

Optimal finished material quality

INOVO pulverizers have a longstanding track record for producing consistently high-quality powders for rotomolding, extruding, mixing, recycling, and other processes. With state-of-the-art controls that ensure optimally high production rates, our pulverizers reduce the size of polyethylene, PVC, Nylon, PET, UHMW and many more. Developed by our engineers under intense factory and field-testing conditions, our equipment handles even the most demanding applications trouble-free.

Contact us to book a demonstration or to order your new pulverizer today.

Pin Mill

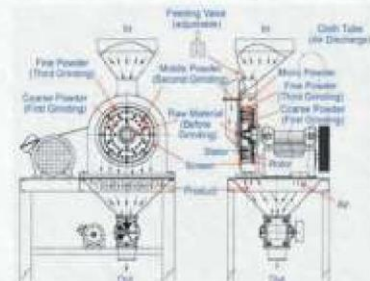

Pin Mill is suitable to grind crystal and brittle materials. The output fineness can be changed by replacement of the filtering-screen and adjustment of the rotor speed. With a wide range of applications to a variety of products, and the features of optional grind disc replacement for proper materials. Especially, this machine is easy to clean (water rinse) and do maintenance.

M1 Series

- Processes a wide range of raw materials. Durable, low-waste design.
- Easy to operate, saves time & power, highly efficient.
- Durable components are easy to replace & clean.
- Fineness: 20-200 Mesh. (data is for reference only & may vary according to raw material)

Features

Ideal for pulverizing any materials (except highly oily or sticky ones). Due to the variety and interchangeability of internal components, this equipment has wide production adaptability, ranging from granular material to super-fine particles. Turnkey system is designed to prevent contamination of materials, increase efficiency, lower manpower requirements and maintain material quality.

(Machine Layout)

Stud type Rotor	Stud type Stator	Screen Ring	Application
			Brittle materials : achieves exceptionally high Apply materials : grains,beans,foodstuff, Bantonite & Chemicals.

*Accessories Shown on Machine image are not part of standard scope of supply.

Worldwide Installations

📍 Plot No. 7/8, Opp. Narmada Canal, Naroda
Dehegam Road, Zak GIDC.-302010.
